He limited the term anterior cardinal vein to this caudal portion, and analyzed the cerebral portion into a primary vessel (the vena capitis medialis) and a secondary vein (the vena capitis lateralis). At this point Evans gave his beautiful injections of early blood-vessels, published in 1909. He showed the form of the primitive vascular plexus of the brain and also how this plexus covered the surface of the forebrain, encircling the large optic vesicle with a chain of capillaries and spreading over the surface of the thalamus and midbrain. He described how this extensive plexus became a...
