Springer-Verlag New York Inc., United States, 2005. Hardback. Book Condition: New. 242 x 210 mm. Language: English . Brand New Book. The book is based on the course on general relativity given regularly at the Physics Department of Novosibirsk University. The course, lasting for one semester, consists of 32 hours of lectures and 32 hours of tutorials, plus homework of 10 - 12 problems. The exam is passed by 30 - 35 students. The results of the homework and exam give good reasons to believe that at least 20 - 25 of these students really digest the subject. The course requires of students the knowledge of analytical mechanics and classical electrodynamics, including special relativity. Only chapters 7 and 10 of the book are in this respect exceptions: the acquaintance with the notion of spin is useful for studying chapter 7, the fundamentals of thermodynamics and quantum mechanics are necessary for the last chapter. But these parts of the book can be skipped without any loss for understanding all other chapters. The book (as well as the course itself) is influenced essentially by the monograph by L.D. Landau and E.M. Lifshitz, *The Classical Theory of Fields*, (Butterworth - Heinemann, 1975). However, I strived to make the exposition as close as possible to a common university course of physics, to make it accessible not only for theorists.
